# IDF-BIO

## Multi-modal Biometric Integration Platform

IDENTITY

MATTERS

# ID Force Biometric Integration Platform

The IDF-BIO interface was created to enable easy connections with identification and authentication biometric hardware. It compliments the use of SDK's and API's supplied by Biometrtic vendors.

Our goal is to give system integration partners, end-user IT development teams, and ourselves a reliable and adaptable method for creating and maintaining user interface applications.

We can offer a versatile and future-proof system by emphasising cross-platform interoperability and guaranteeing continuous support for SDKs and APIs. This approach helps not just your team but also your integration partners and end users by enabling them to develop and manage apps that really fit their needs.

## The main features are:

### Biometric Hardware Agnostic

You choose the biometric hardware of choice from one or more vendors

### Cross Platform Development

IDF-BIO is available on Windows, Android and Linux platforms.

### User Interface Tool

You can use it with our Identity Management Suite and your biometric vendors of choice fo back-end matching.

### Cloud & On-premise Support

We support Cloud, on premise and on device deployments.

### Reduce Go live

Our solutions will help your team deliver your end-user solutions faster so you do not get delayed by re-inventing the wheel

### Easy Proof of Concept

Fast POC means you can get concensus to proceed and develop what & when and meet your end-users timelines.
