Law Enforcement & Military **Identity Management Suite**

ID Force provides a flexible and user-friendly digital imaging solutions for automated capture, storage, and retrieval of booking images and related information.

Multi-Device Options

System Overview

The ID Force IDENTITY MANAGEMENT SUITE (IDMS) - Law Enforcement has been developed in response to the needs of Law Enforcement agencies to capture high quality biometrically enrolled identities including Face, Fingerprint and Iris. The Law Enforcement suite includes the capture of a range of custody images required by many police forces worldwide.

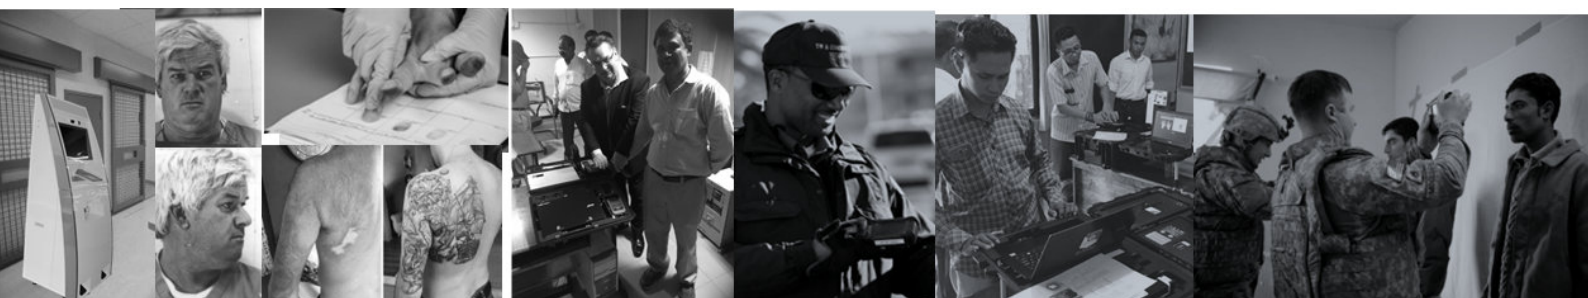

Solution Overview

Modular (Android & Windows ready) and extensible by design the IDMS - Law Enforcement can be hosted on enterprise VM solution (on premises) or in cloud computing platforms such as Amazon, Azure and Google Cloud Platforms. The core modules can be installed separately or as a complete solution.

Information is collected and interfaces with existing RMS & ABIS systems using standard industry file formats.

The modules are designed to be flexible and can be customized to complement exiting SOP's. This ensures change management and deployment will cause minimal disruption to day-to-day operations.

User training is offered using the train-the-trainer approach and ongoing support is provided as required and can be 24/7/365 days. After trainingg our customer can provide level 1 support and ID Force provides level 2 & 3 Support 24/7/365
